Thanks Kristine, we will incorporate that change.
Jim.

Subject: Fw: Stormwater FSP & QAPP Approval

Jim, Bob and Rick,

Since EPA approved the Stormwater FSP on February 15, 2007, the Stormwater Technical Team has made a change in one of the sampling points at Oregon Steel Mills (OSM). This change was due to OSM installing a treatment system on the outfall (WR-24) proposed in the February 7, 2007, FSP submitted by the LWG. The addition of treatment to this outfall would not allow the data to meet the objective of this sampling event (i.e., to determine stormwater contributions to fish tissue) since the fish tissue data was collected prior to the installation of treatment. Consequently, EPA approves sampling at outfall WR-22 to obtain the information from this site. Please include this change in the FSP revision due on March 1, 2007.

Thanks,

Kristine Koch

RE: Stormwater
Approval

Chip and Eric -

We are moving forward with stormwater sampling and revisions to the Stormwater FSP per the approval below. However, we noted that one sampling location change was agreed to among the Stormwater Tech. Team during this review period but was not reflected in EPA's comments. The change is to sample at WR-22 instead of WR-24 at the Oregon Steel Mills Site.

Could one of you provide an email requesting this one additional change (which would also be made in the final FSP due back to EPA by March 1, 2007)? This would provide a paper trail for us to document the reason for this one additional change. Thanks very much.

Carl
